
How early leads evolve as social influence strengthens
(a) Weak influence: both kinds of lead fade
$\lambda = 0.20$
(b) Intermediate: communities converge, shared lead grows
$\lambda = 0.90$
(c) Strong influence: both kinds of lead grow
$\lambda = 1.35$
community 2 early lead z_2
community 1 early lead z_1
community 1 early lead z_1
community 1 early lead z_1
